REMOTE CAPTURE
A better way to handle checks

CHECK IMAGING IMPROVES YOUR CASH MANAGEMENT AND SAVES YOU TIME AND MONEY

National City's Remote Capture is a state-of-the-art receivables solution that allows businesses to capture images of checks received and to deposit those items electronically from the convenience of their own office. National City provides software, scanners and support to turn your PC and internet connection into a "virtual teller window."

Remote Capture offers exciting features to simplify your workflow and to strengthen your internal controls. Intelligent Character Recognition technology automatically reads and enters check amounts, eliminating data entry. Duplicate item search and MICR line validation help detect fraud. Image quality and usability tests reduce risk of returns due to poor images. Consolidated reporting tools assist with cash management and audit controls.

Remote Capture does more than just save you a trip to the bank. You can now deposit checks into one bank account from anywhere in the world, eliminating the need to transfer funds from multiple depository banks for investments or working capital needs. Decreasing the number of bank accounts you maintain can also reduce bank fees, free up non-performing balances, lessen the number of account reconciliations and streamline treasury management overall. Later deposit cutoff times allow you to get receipts into your account faster. And, of course, it saves the time and costs associated with the trip to the bank!

Completes suite of receivables solutions

Accelerates funds consolidation

Extends deposit windows

Requires fewer depository banks

Eliminates courier costs
