Philly's Network Gets a Boost from Remi Communications

Remi Communications delivers superior, cost-effective design for the deployment of a next-generation core network architecture for Philadelphia's City Net

GREENSBURG, PA, AUGUST 16, 2007 — Remi Communications, a leading data and voice provider for enterprise customers, today announced that the Mayor's Office of Information Services (MOIS) of Philadelphia has awarded Remi Communications a contract for the design and support of a core network architecture to deliver a wide range of robust services using the "City Net" network framework as the primary transport.

City Net is a wide-area enterprise network that provides city-wide data communications to all of Philadelphia's agencies. The goal of the network is to create a more efficient way to manage, maintain and communicate with the properties and city departments of Philadelphia.

Remi Communications was chosen to provide comprehensive review and architectural design services, in addition to development and deployment of the core network architecture. Remi will also administer complete operational, customer and technical support, and provision various network-based services and applications as needed.

"Remi Communications was selected after careful consideration of the company's abilities to meet public requirements of the contract and the needs of the city department and those it serves," explained Terry Phillis, CIO of the Mayor's Office of Information Services for the City of Philadelphia. "With Remi's network infrastructure, we'll be able to deliver optimized, cost-effective services that fully support the goals of this program and maximize the city's infrastructure investment."

“As metropolitan areas like Philadelphia rely more heavily upon the data-based communications of municipal networks to oversee city services and agencies, quality of service (QoS) becomes paramount,” said David J. Malfara, President and CEO of Remi Communications. “Our QoS-based network infrastructure design leverages City Net to support intelligent network services that create a compelling offering and streamline the city-wide management effort”

About Remi Communications

Remi Communications is one of the first providers of scalable, simple wide-area networks with “application-aware” Quality-of-Service (QoS). We also host applications that directly benefit from our QoS-enabled approach to information flow, including voice and data products with a special focus on the needs of multi-location enterprise customers. The customer connects through a simple Ethernet interface; nothing could be easier. To learn more about the RemiCOMPLETE™ network, please visit our Web site at www.remicommunications.com.
