

Executive Summary

Topic: Youngsville High School- SIP Trunks

Committee Date: September 28, 2015

Summary

Quotes were received for data services known as SIP connections or trunks, to support a phone system upgrade at Youngsville High School. A SIP connection or Session Initiation Protocol (SIP) is a Voice over Internet Protocol (VoIP) service offered by many Internet telephony service providers that connects a company's private branch exchange telephone system to the public switched telephone network via the Internet.

Zito Media Communications submitted a partial year quote for SIP trunks. This service upgrade will allow the district to deploy VOIP phones to each classroom, office, and common areas. The district has already acquired telephones through another district who sold their surplus at a discounted rate.

Final cutover will depend on service migrations schedules from Verizon, it is anticipated that full cutover will be active by mid-December.

Monthly recurring fees will be paid through the communications budget replacing the current phone system charges. Services and nonrecurring charges are billable as service is activated.

Recommended Motion

That the Board of School Directors approves the agreement from Zito Media Communications to install and configure SIP trunk data services for Youngsville High School until June 30, 2016.
