CREATING AN APPLE DEVELOPER ACCOUNT

To submit an app to the Apple App Store, you first need to set up a developer account. Once you have setup your developer account, we can do the rest for you! To start the process, you will need to create an Apple ID. We highly recommend using an Apple ID dedicated to your school/ district/organization using a dedicated email address as well. This can be a free address such as Gmail or Yahoo or using your schools/district/organization domain. Apple requires the account be opened with the name matching the main D-U-N-S Number and not the name of satellites.

*Note: Apple will only establish a developer account in the name of the parent organization. This means most accounts will use your district's or organization's name and D-U-N-S number.

If you have any questions throughout the process feel free to contact us. Visit http://siap.ps/7cf5b0 to get started.

For added security, Apple requires **Two-Factor Verification** to be enabled for your account. To successfully set this up on your device please visit **https://support.apple.com/en-us/HT207198**.

You may now start the enrollment process for a Developer Account. Visit **http://siap.ps/91e659**. After you complete the enrollment forms, a representative from Apple will call and/or email you to verify your enrollment information and continue the enrollment process.

Once you have completed the enrollment process, you will need to add our developers in two places to your account. Please invite SchoolInfoApp as an Admin to your account. **THIS IS NECESSARY FOR SCHOOLINFOAPP TO KEEP YOUR APP UP-TO-DATE AND FUNCTIONING PROPERLY.**
